City of Buda Hires New City Engineer

John Nett has been hired as our new City Engineer. John started working for the City of Killeen in 2002 as a Project Engineer/Drainage Utility Director and progressed to City Engineer in 2006. He is a Certified Floodplain Manager.

John is a graduate of Kansas State University with a B.S. in Civil Engineering.

In Killeen he was responsible for ensuring private and public civil infrastructure were designed and constructed in conformance with applicable codes, regulations, and standards. He coordinated plans and specifications review, and construction inspection and testing services for new development and for a wide variety of capital improvement projects.

“The development pressures and infrastructure needs of the local area are not unlike the range of projects I have been involved with for the City of Killeen and the Fort Hood Army Installation,” Nett said. “In addition to my service to these large public works operations, I have had the pleasure of working with the staff of smaller municipal utilities in Colorado, Iowa, Missouri, and Arizona.”

John has hit the ground running and is thrilled to be working for the City of Buda.

“Sometimes an opportunity comes by that you just can’t pass up from the most unexpected source. I wasn’t looking for the City of Buda, but it found me. I’m really excited to be here.”
